

# Harness the power of nature

Dan Menezes (pictured) knows renewable energy is the way of the future.

The electrical engineer recently started GV Wind and Solar to provide solar installation solutions for small and large-scale operations.

The Shepparton resident is hoping to raise awareness of this new frontier for the solar industry.

"I work closely with clients to understand their current energy usage," Dan said. "I then design personalised systems

which are suited to their homes and will offer them the best results."

With electricity costs rising rapidly, Dan believes renewable energy provides the solution for the future with wind, solar and battery storage solutions available to clients.

Having lived in Shepparton most of his life, Dan has seen first-hand the effect electricity prices can have on people.

"I am here to help people in the Goulburn Valley by offering them my best advice at the best price," he said.

Dan specialises in battery storage solutions which he believes offer people a number of benefits.

The batteries mean people can store solar energy from the day to be used later on that night.

Dan is hoping to eventually have a shopfront to offer his services on a larger scale.

Dan encourages anyone interested to give him a call and have a chat about how solar energy can benefit them.
